

Generator Maintenance

Generator Maintenance

When failure is not an option™

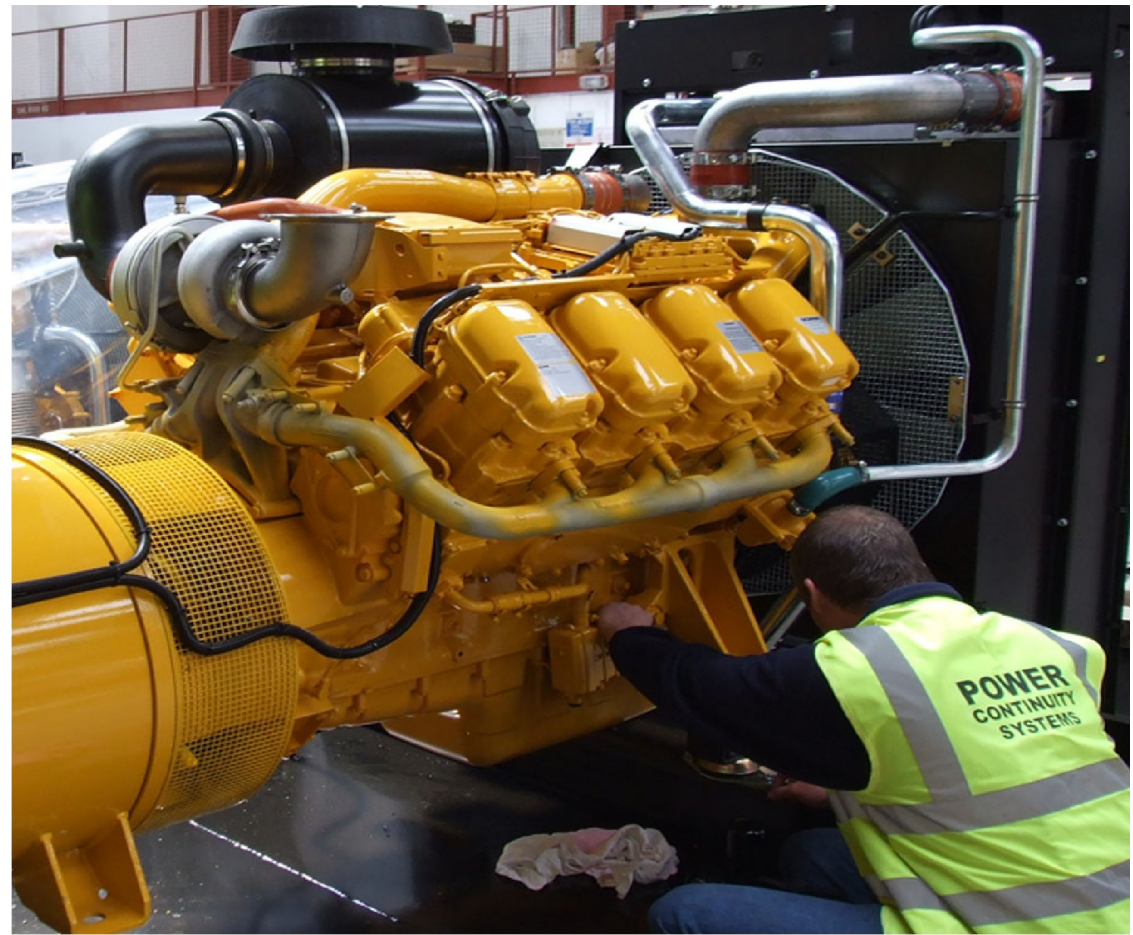

Power Continuity can service and maintain your generator systems in accordance with its manufacturer's specifications, wherever the generator is situated in the UK.

The ultimate in power protection for your business, responsible Generator Maintenance.

Your Generator is maintained by our engineers with over 20 years of unequalled experience in the field.

We offer a comprehensive menu of services and service options which enables us to add real value.

Generators

Leading Generator makes covered for Generator Maintenance

JOHN DEERE

PowerContinuity Systems has established a hard won reputation for reliability with power protection and a positive customer service, covering all aspects of power protection maintenance

Generator Repair

Generator maintenance and generator service visits are absolutely necessary to keep your generator in peak performance, in accordance with the manufacturer's specification and requirements.

PowerContinuity specialist engineers can also repair and maintain most makes of engines even the unusual.

Generator maintenance will protect your power investments.

Location

Not every generator is easily accessible:

- City Centre roofs
- Secure Facilities
- Remote locations

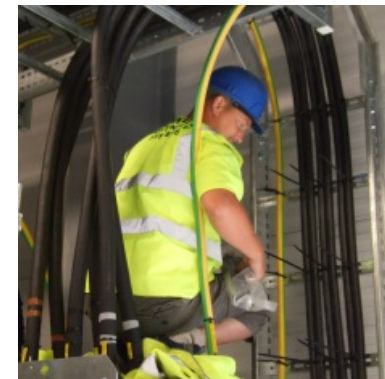

Out of hours - All our contract customers have the comfort of a 4, 6 or 8 hour response 24/7/365 to site together with our 24 hour help line. There's a specialist engineer here to help wherever your generator is located.

Prevention

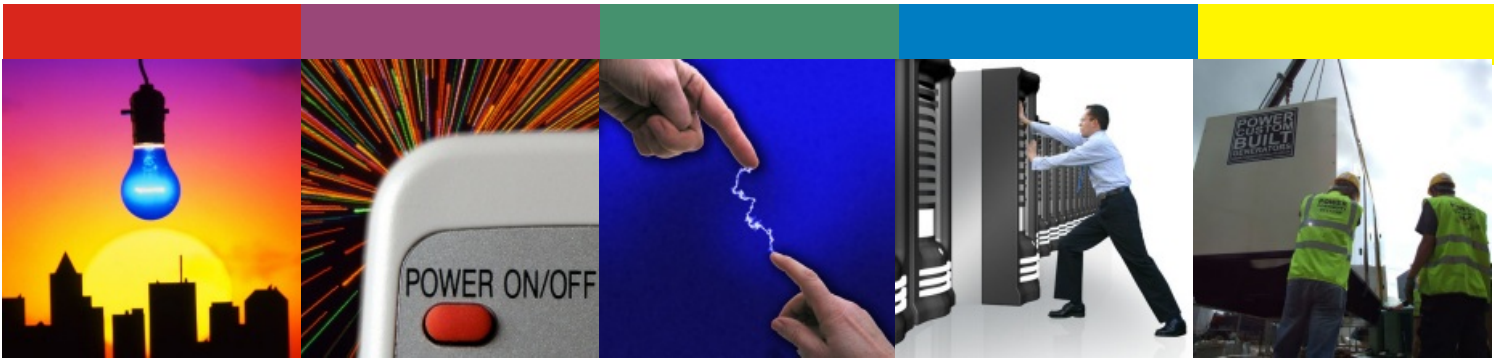

In power supply management, prevention is better than cure, a regular maintenance regime makes economic sense.

Eliminate downtime - specialist servicing helps prevent equipment failure and power failure.

To keep your generator in peak performance, Power Continuity Systems provide 2 generator service and generator maintenance visits per year. With optional load bank testing if required
