

Generators

Generators

Power Continuity designs, manufactures and installs bespoke diesel generators. From open set to acoustic canopies, standby or prime, 30kVA to 3MVA, PowerContinuity Systems can provide you with a bespoke Diesel Generator power protection solution in virtually any location.

Our experienced teams, with over 20 years experience will guide you from the initial site survey and consultation through to installation, commissioning and discussing our after sales servicing and maintenance plans.

PowerContinuity Systems are totally independent and can therefore recommend the best solution for your organisation with complete impartiality. PCS work with all leading generator brands.

Generator Installations

Leading Generator Makes Available

PowerContinuity Systems deal with all the leading brands of diesel generator engines. PCS are 100% independent so you can always be assured that our fully trained and experienced team will advise you of the best option for your bespoke requirements.

We pride ourselves on the industry leading reputation we have with power protection guaranteeing exceptional customer service and added value. We already protect over 10% of the UK's end users each

Complete Power Solution

We don't just install generators. PowerContinuity Systems offer a comprehensive service including full project management of your power system solution, from design to installation and maintenance - We care from conception to protection:

- Full planning including survey, plans and schematics
- Liaison with any applications to planning departments, road closures as well as with your local electricity provider
- All ground works, trenching, welding and palisade security fencing erection, concrete plinths and earthworks
- Cabling, installation, delivery, positioning and testing of all equipment both at the factory and on site
- Test certification, commissioning and end user training.

Location

Not every generator is easily accessible:

City Centre Roofs

Secure Facilities

Remote locations

Power Continuity has successfully carried out generator installations in all of the above situations and we are happy to carry out these more demanding installations efficiently and safely.

Health & Safety

PowerContinuity Systems take Health and Safety very seriously. Our engineers are fully competent and trained in safe working practices to ensure their own safety, as well as that of others attending the installation; this is shown in our industry leading health and safety performance. Before the works commence, we will issue our Safe Systems of Work for the project.

Environmental Responsibility

In this modern age organisations are giving more attention to the impact of their activities on the environment. PowerContinuity Systems is no different. Our operations are managed by an Environmental Management System accredited to BS EN ISO 14001 and we are committed to attaining the highest available environmental standards, complying with existing legislation in every aspect of our work. As we find areas where we can improve our environmental policy we are pleased to make adjustments, so we can work in harmony with the environment whilst giving the best service to our clients.

We are also able to offer our clients a range of sustainable innovations as part of their Generator power protection system.

Servicing & Maintenance

Standby generators require regular maintenance checks to ensure they are in tip-top condition. We offer maintenance contracts so you have peace of mind that your generator will receive semi-annual visits to assess the equipment and maintain it, so it will provide the power you need, when you need it. What you don't maintain... will fail.

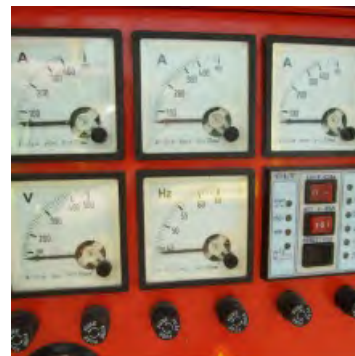

Our engineers can carry out all maintenance activities including:

- Preventative checks
- Load Banks
- Commissioning
- Emergency callouts

Emergency Cover

Our maintenance contracts mean you also have 24-7 emergency access to our generator engineers. A four to eight hour response time means any problem that may develop will soon be addressed.

As well as designing, manufacturing, installing and servicing bespoke power generation systems, PowerContinuity Systems also carry out generator removals.

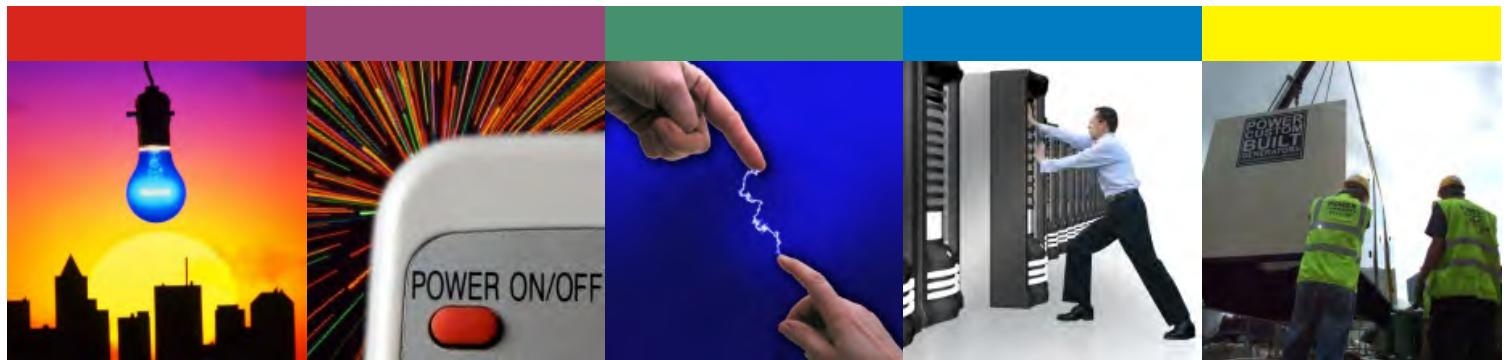

Are you moving premises and want to take your generator with you? Or do you want to replace your old one for a new one? Power Continuity can move the generator for you including all disconnection and re-connection works. We can also take away your old generator for you.

In addition to Diesel Generators, Power Continuity carries out Uninterruptible Power Supply installation, maintenance and repairs. For sensitive mission critical equipment such as telecommunications, computers and servers, a UPS will carry your load whilst the generator starts up. It will also protect your equipment from the dangers of power spikes, lighting strikes and sags.

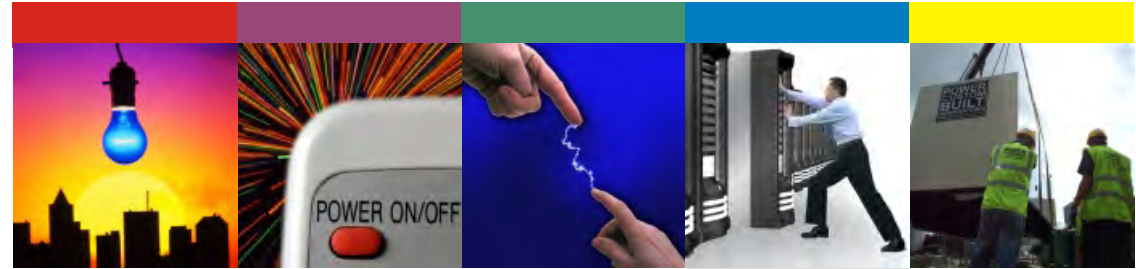

For all your power protection requirements, please contact PowerContinuity Systems The Power Protection Partner.
